What factory ammo are you shooting?

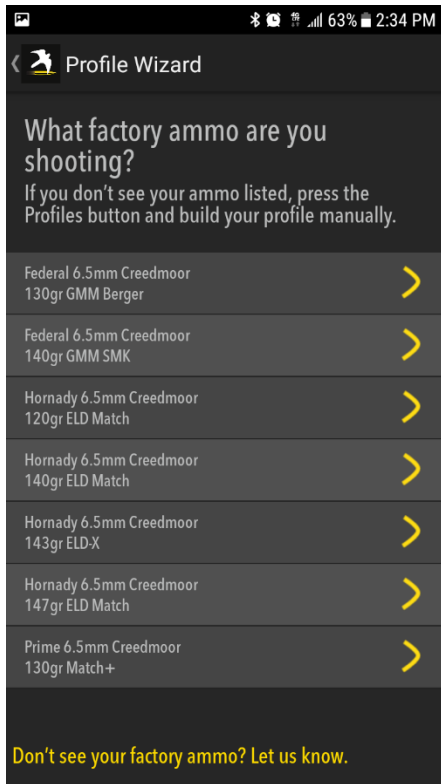

What factory ammo are you shooting?
If you don't see your ammo listed, press the Profiles button and build your profile manually.

How to use the Kestrel LiNK Ballistics Ruger Profile Builder Wizard (note screenshots for iOS will vary slightly):

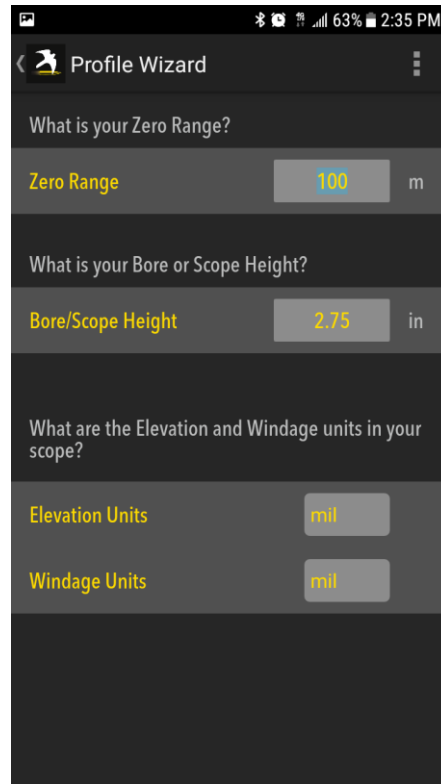

Select the Ruger Rifle that you are using.

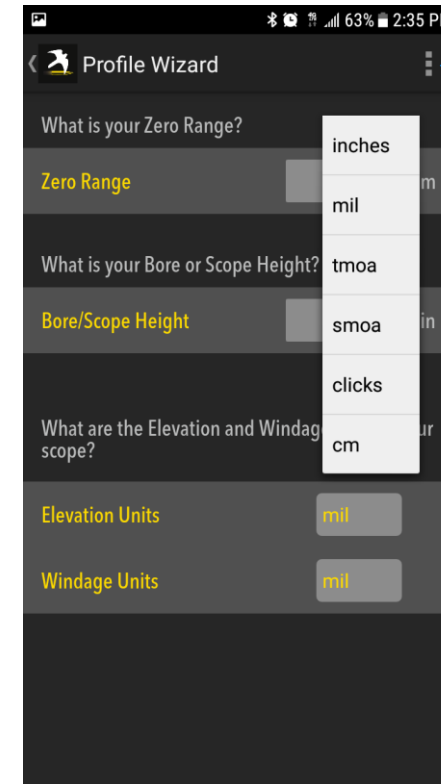

Select the type of ammo.

Adjust your Zero Range and Bore/Scope Height.

Zero Range should typically be 100 yards.

Bore/Scope Height can be measured from the center of the bolt to the center of the scope.

Select the Elevation and Windage units that you use. If for instance you use $\frac{1}{4}$ MOA per click, choose clicks.

Then go back into the profile after saving and set 4 clicks per TMOA.

Do not forget to click the More Options button and select SAVE PROFILE when completed.
